

Perf MessageSet

The *Perf* messageset contains the messages used by the Performance Monitor application to measure the processing time for messages.

Message Definitions

TESTCX

```
typedef struct
{
    int arg1;           dummy argument
}ROME_T_TESTCX;
```

The *TESTCX* message is sent by a sending process to the destination process where it should be handled within the main process (i.e. not in the Queue Handler). The receiver should reply to the message after incrementing a counter. The *arg1* field is unused.

TESTQ

```
typedef struct
{
    int arg1;           dummy argument
}ROME_T_TESTQ;
```

The *TESTQ* message is sent by a sending process to the destination process where it should be handled within the Queue Handler (i.e. not cause a context switch). The receiver should reply to the message after incrementing a counter. The *arg1* field is unused.
